

Future Challenge Enterprise

Quality solutions for quality companies

"Quality means fulfilling requirements. We are committed to achieve this. It is the right of our customers to assess it."

This is one of the basic principles, written in our Quality Charta. And it simply means: The benchmarks for the quality orientation of all the 120 GUS employees are the high quality standards of our customers. And we can measure it: **Our customers are simply more satisfied.***

Quality derives from competence. For more than a quarter of a century GUS Group of Germany supplies the quality oriented industries such as pharmaceuticals, biotech, chemicals, cosmetics, food and logistics with enterprise applications. GUS Open Solutions for enterprise resource management

(ERP), quality management, financials, controlling and analysis, customer relationship management (CRM), supply chain management (SCM), document management and archive for manufacturers, service and retail are the main focus of the GUS Group and its employees.

Founded in 1980 GUS Group keeps being a young company by reinventing itself continuously. Thus we combine experience with innovation, proven remedy with modernity. As our customers adjust themselves in their respective markets, so we align to new challenges in the markets we serve. Living flexibility is what makes GUS-OS a solution that adjusts to your **enterprise**, your **challenges** and your **future**.

* According to an independent market survey from Trovarit AG.

GUS Group – all in one gush

consultants and industry experts understand the very specific challenges and regulations of your quality-oriented business. GMP or Good Manufacturing Practice are the foundation not only of the business of our customers but the underlying principles for GUS Group and its employees. Numerous successful supplier audits show that we share the quality orientation of our customers.

Quality excels

GUS-OS solutions are prospectively validated and thus diminish the costs of computer validating, which is mandatory in the pharmaceutical industry. Dedicated industry experts for pharmaceuticals, chemicals, food and logistics assure a competence team for your project to identify and implement business process improvements. System engineers help to size and scope the IT-infrastructure to your needs. Our software development is established regarding the guidelines of the GAMP scheme for programming and testing. Together with a wide variety of partners, GUS Group extends the functionality of the GUS-OS solution offering. GUS-OS is open to interact with third-party applications. Furthermore, in the GUS ByD Solutions GmbH, we have summarised all of the development activities for Business

byDesign of our partner SAP. Through this partnership, the GUS Group is capable of offering an international solution to complement the GUS-OS solution offering. With both offers, we are meeting the increasing internationalisation concerns of our customers.

With a partner (LogAgency) dedicated for OnDemand solutions and web services we provide electronic business functionality and security solutions. Electronic signature, data transformation, electronic billing and software as a service make LogAgency and GUS-OS solutions ready for the future of software business.

System partners like IBM, Microsoft, T-Systems and others proved a network of support and services around GUS-OS solutions regarding hardware, network, storage and security.

Our clients' satisfaction is the company goal of the GUS Group. Therefore, the GUS Group regularly analyses the

Excerpt from a suppliers audit:

“According to good audit results we recommend the implementation of GUS-OS ERP within GMP-related areas without any constraints ... The company was able to prove, that GUS-OS ERP was developed under the rules of a sophisticated quality management system. This quality management system satisfies the GMP-requirements for software engineering.”

GUS and customers – qualified growth

clients' feedback as well as actual process characteristics and information. In addition, a project-information-system as well as customer events provide an informative basis concerning improvement possibilities in services,

products, and in collaborations.
